PRESS RELEASE

FOR IMMEDIATE RELEASE

U.S. RACK™ OFFERS a Canopy Rack that bolt to the top of toppers and carries up to 250 lbs.

Madera, CA – U.S. Rack offers the pickup owner with a topper a no-drill alternative in truck-bed rack systems. The re-designed Canopy Rack is designed for carrying up to 250 lbs of cargo on truck toppers. This universal rack will fit any canopy with a generally flat roof which is at least 52 inches long. Its mounting feet are adjustable so it will fit toppers of any width. Sturdy side rails contain cargo, and metal loops integrated into the rails make tying cargo down easy.

Some drilling is required to install the mounting feet, but the rack frame may be mounted or removed as one piece in less than 5 minutes. Rubbery gasket pads under the mounting feet resist water leakage into the canopy. Maximum load capacity is limited to the strength of topper or to a maximum distributed load of 250 pounds, whichever is less.

Made of black semi-gloss powder-coated steel and weighing only 35 lbs, the canopy rack adjusts to fit any size topper and installs or un-installs quickly by disconnecting the body of the rack from the low profile mounting feet which remain bolted to the topper until needed.

“Our Canopy Rack offers the pickup truck owner a great value in a durable, versatile, cargo rack for the topper”, said Chris Green, owner of U.S. Rack. “It’s perfect for the pickup owner, who needs a great all-purpose, particularly if he wants to be able to remove the rack and store it when it’s not needed”.

The Canopy Rack is very affordable and is warranted for a period of one year against all structural defects in materials and workmanship when assembled and installed properly. For more info or to order online, visit http://www.usrack.com/canopy_rack.php
