## **PRESS RELEASE**

FOR IMMEDIATE RELEASE

### **US RACK™ OFFERS A NEW NO-DRILL RACK THAT WORKS WITH THE ACCESSORY RAILS IN TOYOTA AND NISSAN TRUCKS**

**LAS VEGAS, NV** – U.S. Rack has released a new no-drill alternative in truck rack systems at the 2007 SEMA Show in Las Vegas. The new rack called the Rail Rack carries up to 400 lbs. It sits on the bedrails of trucks with conventional fleetside bedrails as well as newer trucks with the Toyota Deckrail system Nissan Utili-track system.

The Rail Rack is made of sturdy tubular steel and consists of two sections. The front section supports a crossbar just behind the cab. This can be used alone as a headache rack or used in conjunction with a second section that supports a crossbar at the back of the bed. The back section can also be moved forward or back along the bedrail to the desired location. The rack easily installs in about 5 minutes without drilling and can be quickly removed and stored as needed. The Rail Rack is also compatible with many OEM Toyota and Nissan accessories such as slide-able tie downs and tool boxes.

Racks are available in carbon steel or stainless steel by special order. Carbon steel racks are powder coated black. Stainless steel racks are powder coated silver gray. Rubbery pads on contact surfaces helps protect truck surfaces.

“Our Rail Rack is a great universal rack truck owners a medium duty rack that easily and quickly installs without drilling or degrading the resale value of the vehicle. This is the type of rack that Toyota and Nissan customers especially have been looking for”, said Chris Green, CEO of U.S.

Rack. “One that is compatible in style and function with the new generation of trucks with accessory rail systems”.

The Rail Rack is exceptionally affordable for the complete two-section rack system. Rail Racks are warranted for a period of one year against all structural defects in materials and workmanship when installed properly.
